OBJECTIVE

I am looking for an opportunity to begin my professional journey in a supportive and growth-oriented environment. Eager to learn, contribute, and collaborate on meaningful projects that create real-world impact. I hope to continuously grow through new challenges and hands-on experience.

SKILLS

- **Machine Learning** - Experienced in training models, preprocessing datasets, and analyzing results using standard evaluation metrics
- **Python** - Expertise in TensorFlow, Langchain, Scikit-Learn, Matplotlib, LLM integration, data structures, conditional operators, and iterative logic
- **C Programming** - Experienced in using operators, loop constructs, and handling various data types efficiently
- **Deep Learning** - Knowledgeable in neural networks, CNNs and RNNs, activation functions
- **HTML, CSS, REACT**
- **UiPath** - Knowledge in control flows, conditional activities, loops, and triggers for automation
- **WordPress, Wix Studio**
- **Arduino Programming** - Worked with IR and UV sensors, servo motor control, LED display, and serial communication for sensor-based projects
- **SQL** - Acquainted with basic queries such as filtering, sorting, and creating simple tables
- **Graphic Designing** - Experienced in basic queries such as filtering, sorting, and creating simple tables
- **Problem Solving** - Able to approach challenges with logical thinking, basic debugging skills, experience in prompt engineering for LLM-based applications
- **Time Management** - Comfortable handling tasks with planning and prioritization, and meeting deadlines through consistent effort
- **Creative Thinking** - Enjoys crafting simple, effective solutions with user-friendly features and intuitive design

EXPERIENCE

DoctorAssist.ai – Full Stack Software Developer

July 2025 – January 2026

Brief: Involved in the development of an AI-enabled healthcare platform supporting clinical workflows and intelligent decision support.

Responsibilities: Commonly worked with MongoDB for storing and managing structured healthcare data, built and consumed FastAPI-based backend services, developed responsive user interfaces using HTML, Tailwind CSS, and React, and integrated LLM-based AI features into the application flow.

Technologies: FastAPI, Python, MongoDB, HTML, Tailwind CSS, React, JavaScript, LLM, and AI Models

Project 2: AI-Powered Waste Management Personal Assistant for Harithamithram App

Brief: Built an AI chatbot for the HarithaMithram app to assist users in waste management.

Responsibilities: Preprocessed the dataset for LLM integration and designed the chatbot's front-end interface.

Technologies: Python, LangChain, Retrieval-Augmented Generation (RAG), LLM API, HTML, CSS

Project 3: AI-Powered Chatbot for College with Dynamic Web Data Integration

Brief: Developed a smart assistant that dynamically extracts and interprets college website data to

provide accurate and context-aware responses to student queries.

Responsibilities: Took charge of prompt engineering for optimized LLM interaction, designed the chat-bot's UI/UX, and performed thorough functionality testing to ensure accuracy and responsiveness.

Technologies: Python, LangChain, Retrieval-Augmented Generation (RAG), HTML, CSS

Project 4: Web-based Food Recommendation System (ML)

Brief: Designed a personalized recommendation system that suggests food items based on user preferences using machine learning and NLP techniques.

Responsibilities: Trained the model, created and preprocessed the dataset, and performed analytical evaluation to enhance recommendation accuracy.

Technologies: Python, Flask, Machine Learning, NLP, HTML, CSS

Project 5: Prototype Websites for Client Presentations

Brief: Collaborated with Star Innovations to design prototype websites for client presentations, focusing on layout, branding, and user experience.

Responsibilities: Created front-end designs and aligned UI with client expectations under the guidance of Dr. Binju Saju.

Technologies: HTML, CSS, JavaScript, WordPress

EDUCATION

Adi Shankara Institute Of Engineering And Technology, Mattoor *2021 - 2025*

Bachelor of Technology

Computer Science and Engineering(Artificial Intelligence)

Overall CGPA: 8.48

Mamhss,Koratty

2019-2021

Class XII (Senior Secondary), SCERT

Overall Percentage: 97.5

Mamhss,Koratty

2019

Class X, SCERT

Overall Percentage: 98.8

CERTIFICATIONS

- [Certificate Course on Artificial Intelligence](#) (Infosys Foundation and ICT Academy)
- [Generative AI- 30 hours Add-on Course](#) (GP3 Cloud Innovations)
- [Joy Of Computing Using Python](#) (NPTEL)
- [Machine Learning & Computer Vision And Image Processing Fundamentals](#) (NPTEL)
- [Matlab Onramp Certification & Machine Learning Onramp](#) (MathWorks)
- [Artificial Intelligence Foundation](#) (Infosys Springboard)

ACHIEVEMENTS

- Our project shortlisted and participated in IEDC innovation challenge
- Participated in national level gameathon hosted by JIT Bengaluru
- Participated in Smart India Hackathon 2023
- Developed website for AI department fest Prayag24 and college fest [brahma25.live](#)

EXTRA-CURRICULAR AND MEMBERSHIPS

- Design Lead of Computer Society Of India, ASIET.
- Design Lead of Game Development Club, ASIET.
- Design Team Member of IEEE, SB ASIET.
- Design Lead of Prayag24 AI Department Fest(2024)
